

GIS Meeting with Harry Beatty
July 13, 2006

Participating:

Harry Beatty, Jane Kaneshiro, Teddy Blake (David Murray was also in the office)

Charlier Associates: Jacob Riger, Lisa Malde, Jennifer Valentine

Notes:

- After introductions and a brief project overview, Jacob explained how important GIS is to this project and that we want to include as much spatial data in our mapping efforts as the County is able to give us.
- Lisa gave Harry a map of the study area and asked if Harry had any additional data that might be of use to us. She specifically asked for TMK (parcel) data.
- Harry agreed to give us TMK data, in addition to the streams, trails, walking paths, waterlines, zoning, parks, and streets layers.
- Harry asked who else in the county we had been working with and if they had been able to provide any information. Lisa noted that everyone she had spoken with pointed her to Harry for GIS data.
- Lisa mentioned the Doc Manager for the Koloa-Po'ipū site and suggested using it as a way to transfer data.
- Harry showed Lisa the TMK data and their aerial imagery, and agreed to give us both layers. He decided to burn a DVD of the data because of the large file sizes.
- The group exchanged cards to end the meeting.
